

06 / Selected finished applications

Built to leave the grid.

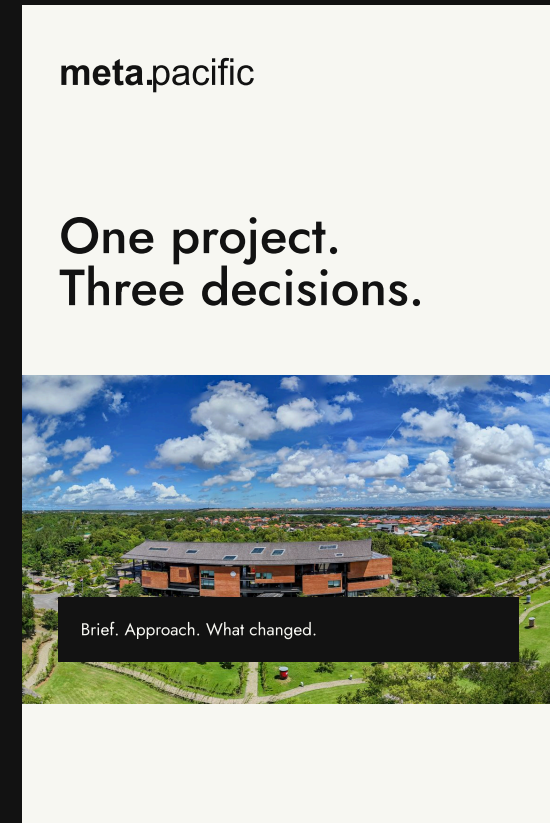

A carousel, Reel, Story, project communication and technology communication, adapted across four platforms.

Carousel / Show the approach.

Caption: "A location is more than an address. Show the setting, explain the way in, then give people a way to explore. That is the job of the sequence."

Reel / Story / Project

Reel typography treatment

Open with the setting. Reveal "THE ROUTE" as the camera enters. Hold "THE SPACE" when the destination becomes legible. One phrase per shot; captions remain in a consistent safe area.

Story treatment

One idea and one native link sticker. Keep the lower interaction zone clear. Let the tour do the explaining after the tap.

Technology / Make the distinction visible.

meta.pacific

**REAL.
RENDER.
LABEL IT.**

Show the difference. Keep the trust.

Caption: "Captured footage, rendered possibilities and interactive layers do different jobs. Label them. Then show how each helps someone understand the project."

meta.pacific

**A new tool.
A clear use.**

Show what it changes for the viewer.

Same idea. Different delivery.

Instagram

Lead with a strong cover, then reward the swipe. Use the three-slide sequence for context, route and exploration.

Next step: save or open the tour.

Facebook

Give more project context in the post copy. A landscape excerpt shows the setting clearly without copying the vertical cover.

Next step: project page or enquiry.

TikTok

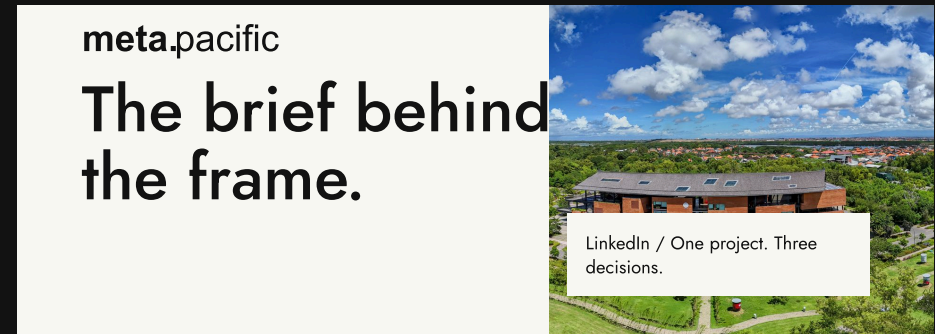

Start with a real question on-camera or over footage. Let the demonstration answer it. Keep the edit conversational, with readable captions.

Next step: watch the explanation.

LinkedIn

Lead with the brief and the decision. Use a document carousel or wide case-study image, then explain the tradeoff in the post.

Next step: discuss a similar brief.

These are platform adaptations, not guaranteed safe-zone specifications. Check the current platform composer and native controls before posting.
