

02 / Creative direction + moodboard

More to the picture.

Cinematic proof meets graphic interruption. The image earns attention; the idea makes it worth keeping.

Cinematic proof. Graphic interruption.

meta.pacific

A closer look

**LOOK
AGAIN.**

A different view can change the question.

Why this direction. The cinematic work supplies credibility. Photographic crops, deliberate empty space and changing type scale let each subject find its own composition. A quiet photograph after a loud graphic frame gives the sequence room to breathe.

A graphic vocabulary with a job.

Image scale

Give a location room to be understood. Follow a wide image with a precise crop, then an open type-led frame.

Type and space

Use a large statement, a small factual label and deliberate empty space. Keep the reading order clear; no decorative symbol is required.

The filter. A graphic element has to introduce a question, reveal an idea or change the pace. Project information stays factual; studio and founder content have more room to play.

Saturated color

Red creates an interruption. Black and near-white give the photograph room. Secondary colors stay available, but each composition uses a limited palette.

Real texture

Use actual locations, imperfect surfaces and working details. The image should tell us something about the place or the person.
